## WHITE CLOVER

### VARIETY PROFILE

#### Registration

2015 (FR)

#### Type

Intermediate

#### Persistence

5 years and more

#### Use

- Cutting: silage, hay
- Grazing

#### Sowing rate

3 kg/ha in association with grasses

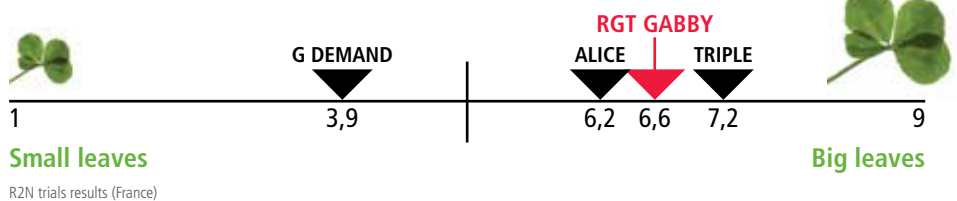

# RGT GABBY

## Boost your sward with protein

### LARGE LEAVES

As a large leaf type, **RGT GABBY** produces a **productive sward**, rich in protein, ideal for both grazing and cutting.

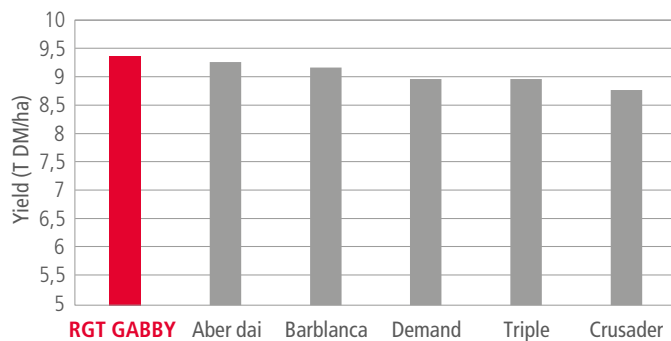

## VERY GOOD BEHAVIOUR IN ASSOCIATION WITH GRASSES

Finding a good balance between clover and grass in mixtures is a major issue and selecting good white clover is essential! **RGT GABBY** has **very good establishment and regrowth vigour** after grazing or a cut, improving its ability to compete with the grasses. It is also not too aggressive, thereby creating a better balance in the sward.

**RGT GABBY** has particularly good winter hardiness helping to preserve a good proportion of clover after a tough winter.

## HIGH LEVEL OF PRODUCTIVITY
