

PERENNIAL RYEGRASS

RGT TRIBAL

Maximize and secure grass production

- Very high silage yield
- Excellent persistency
- Very good tolerance to rust

PERENNIAL RYEGRASS

RGT TRIBAL

VARIETY PROFILE

Type

Intermediate 4n

Persistence

5 years

Use

- Cutting: silage, hay
- Grazing

Seeding rate

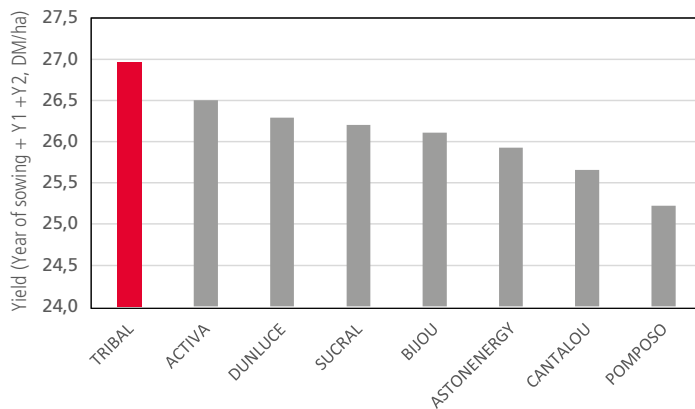

30 kg/ha (pure)

Maximize and secure grass production

MAXIMISE PRODUCTION THANKS TO SPECTACULAR YIELD

TRIBAL has very good yield especially in the first cut, thus it is very well adapted to cutting management.

SECURE PRODUCTION THANKS TO EXCELLENT AGRONOMIC CHARACTERISTICS

TRIBAL has excellent disease resistance (crown rust, stem rust, powdery mildew & Dreschlera) and a good tolerance to frost and drought, helping to ensure a secure harvest.

TRIBAL performs well in good and less favourable situations: it is specifically recommended for use on peaty soils in Germany (Mooreignung).

	TRIBAL*	Behaviour compared to control varieties
Persistency	7,4	++++
Tolerance to frost	7,1	++++
Tolerance to drought	5,2	+++

*RAGT Semences trials results (1 = bad; 9 = excellent)
